Objective

Aspiring Information Technology graduate with a strong foundation in programming and software development, seeking an entry-level opportunity to launch my professional career, contribute meaningfully to organizational growth, and continue building my technical skills in a dynamic environment.

Education

V.S.B Engineering College, Karur

2023 – 2027

B.Tech in Information Technology, CGPA: 7.8 (Upto 6th Semester)

Global Matriculation Higher Secondary School

2022 – 2023

Higher Secondary Education, Percentage: 73.83%

Projects

Hawk AI | *Deep Learning, Computer Vision, Python, OpenCV*

- Designed and developed an automated attendance management system powered by deep learning and facial recognition, operating exclusively through existing smart board cameras with zero additional hardware installation.
- Implemented a real-time face detection and identification pipeline using convolutional neural networks, achieving high accuracy under varied lighting and classroom conditions.
- Generated automated attendance reports and integrated the system with institutional databases, significantly reducing administrative overhead and human error.

Debugging Agent | *Spring Boot, React.js, PostgreSQL, Google Gemini API*

- Developed an AI-powered web application to automate code debugging and error analysis, integrating the Google Gemini API to detect syntax, logical, and runtime errors.
- Implemented AI-based root cause analysis with corrected code suggestions and optimization recommendations.
- Built a full-stack application using Spring Boot, React.js, and PostgreSQL, with REST APIs designed to store debugging history for future reference.

SkillForge AI | *React 19, TypeScript, Spring Boot 3.5, FastAPI, PostgreSQL, Google Gemini*

- Built a full-stack AI career platform enabling students to analyze resumes, close skill gaps, and receive personalized career guidance through Google Gemini integration, with role-based portals for students and recruiters secured via JWT and Spring Security.
- Engineered a semantic recruiter-candidate matching engine using pgvector embeddings and cosine similarity search, replacing keyword-based matching with AI-driven job recommendations and candidate ranking, backed by PostgreSQL, Redis, and Spring Data JPA.
- Designed and implemented 3 AI-driven features — an AI Career Roadmap Generator, AI Resume/ATS Analyzer, and GitHub-integrated Portfolio Optimizer — using Spring AI, Apache PDFBox/POI/Tika for parsing, and scikit-learn ML models for placement prediction, containerized with Docker and deployed via CI/CD on Vercel/Render.

Internship

Encapsulate IT

2024

Full Stack Web Development Intern

- Completed a 30-day intensive internship in Full Stack Web Development at Encapsulate IT, gaining hands-on experience across the development lifecycle.
- Built and deployed responsive web applications using front-end and back-end technologies, strengthening skills in REST API integration and database management.
- Collaborated with mentors on real-world coding tasks, debugging, and best practices for writing clean, maintainable code.

Certifications

NPTEL : Programming in Java

Infosys : Java Foundation Certification

Skills

Technical Skills : Java, Python, C (Basic), HTML, CSS

Soft Skills : Problem Solving, Time Management
